

Danube.INCO.NET: Available Funds

In project Danube-INCO.NET our transfer center is, beside other tasks, responsible for identifying funding opportunities. Based on our analysis we issued end of February 2015 the „Report on available funds for promoting energy efficiency in the Danube Region“.

The report shows how projects in R&D and innovation can be financed. Thematic focus energy efficiency has been expanded to renewable energies and bio-economy. To each program a link to the currently open call is given. Additionally we included a description of relevant funding opportunities in general.

The report has passed several steps of internal and external quality assurance. Updates on funding opportunities will follow. This updates become interesting particularly because of operational programs on national levels. Our analysis shows that in most countries of Danube Regions these programs are not active yet.
