

## **Project Management for the speciality of Political Economy**

**Tver Automotive Suppliers support program is a project on cooperation of the University of Economics and Environment, Nürtingen-Geislingen, and our STC.**

The University of Economics and Environment (HfWU) recognized the significance of transfer to the students of key qualifications and competence in trade. At the Project Management Seminar being a compulsory program of the curriculum the students extensively engage in a real project. Since winter term 2008/09 the students have been working in the Tver Automotive Suppliers support program under the supervision of STC Director Mr Raizner. For more information see students' project web page. The work on the Russian-German project had replaced the Mitreni Support Program, successfully held from 2001 to 2008 in the HfWU. Our STC was a customer for the HfWU in this project on continuous support of economy in the Romanian village Mitreni, as well.

## **In-House Work on Project Training in East Europe**

The offer of the SIBE (School of International Business and Entrepreneurship), under patronage of Steinbeis University, to train senior executives required directly on site in East Europe, as necessary, looks very interesting. Our STC maintains contacts with well-known universities in East Europe. Best senior executives of East Europe will be trained in the future with our help and in close cooperation with the SIBE based on In-House Work on Project Training.

## **Master program in Romania**

To find and retain trained senior executives in manufacture for a long period is a special challenge for the German investors. The School of International Business and Entrepreneurship of Steinbeis University and our STC have an appropriate solution for this. In cooperation with Transylvania University, Brasov, a master program is offered. The well-tried plan brings benefit to all the participants: students obtain optimal on-job education and a master degree recognized throughout the world; enterprises improve skills of their employees and receive all results of the in-house master test; and the university extends and optimizes the educational process.
